🔗 FEDRIK-MDDN

PROFILE

As a dedicated 3rd-year undergraduate, I am passionate about leveraging technology to solve complex problems and tackle real-world challenges. My Strong foundation in software engineering principles, system design, and problem-solving, with practical exposure to modern development tools and architectures. My academic journey has provided me with a solid foundation in full-stack web development, including frontend and backend coding, responsive design, and RESTful API development. I also have experience in mobile application design and development, with a strong focus on building efficient, scalable, and user-centric solutions.

EDUCATION

BSc (Hons) in Information Technology Specialising in Information Technology <i>Sri Lanka Institute of Information Technology (SLIIT)</i> 	2023 – 2026 Malabe
GCE A/L (General Certificate of Education, Advanced Level), Physical Science Stream With Information Technology <i>Mahanama College, Panadura</i>	2013 – 2021 Panadura

TECHNICAL SKILLS

- | | | | |
|----------------------|--------------|---------|----------|
| • Spring Boot (JAVA) | • Mern Stack | • React | • JS |
| • Node JS | • Express JS | • SQL | • Kotlin |
| • mysql workbench | • mongo DB | | |

SKILLS

Problem-Solving: Developed efficient solutions in programming projects.	AI Collaboration & coding: Collaborated with AI tools to develop better solutions efficiently
Adaptability: Quickly learned new programming languages and frameworks.	Team Collaboration: Collaborated with team members on various coding assignments.

LANGUAGES

Sinhala (Native) | English (fluent)

CO-CURRICULAR ACTIVITIES

Member, Cricket Team <i>Tyronne Fernando Cricket Club, Moratuwa</i>	2010 – 2018
Member, Rugger Team <i>Mahanama College, Panadura</i>	2014 – 2020
Member, Science society <i>Mahanama College, Panadura</i>	2018 – 2021
Member, Computer Society <i>Mahanama College, Panadura</i>	2018 – 2021

PROJECTS

Supermarket POS System (React.js(Vite), Spring Boot, MySQL)

Designed and developed a full stack supermarket POS system featuring secure user authentication, product and inventory management, supplier management, billing, and order processing. Built the frontend using React.js and the backend using Spring Boot with MySQL database integration. Implemented JWT authentication, role based authorization, stock tracking, low stock alerts, and dashboard reports for sales and inventory analysis. Followed layered architecture, REST API design principles, validation, and exception handling best practices.

HabitBuddy – Habit Tracker Android Application (Kotlin+java, Android Studio)

Developed a modern habit tracker Android application that helps users create, track, and manage daily habits through a clean and intuitive user interface. Built the application using Kotlin in Android Studio, implementing efficient activity and fragment management for smooth user interactions. Integrated local data storage, reminders, and user progress tracking features while following Android best practices to ensure performance, usability, and data reliability.

BOOKS – Online Book Store Web Application (Spring Boot – Java, React.js, MySQL)

Collaborated with a team to design and develop a modern online book store web application that enables users to browse, search, and purchase a wide range of books through an intuitive user interface. Utilized Spring Boot (Java) to build a secure and scalable backend, MySQL for efficient data management, and React.js for a responsive, modern frontend experience. Implemented user authentication, role-based access control, and secure payment-related workflows using Spring Security, ensuring data integrity, system reliability, and user protection.

Peer to Peer Study Support Platform – Module & Resource Management Area (Spring Boot, React.js, MySQL)

Worked as a team member in developing a peer to peer study support platform that allows students to share and access study materials. Responsible for the Module & Resource Management component, including module creation, student uploads of videos and PDF resources, admin approval workflows, and resource publishing. Developed frontend features using React.js and backend services using Spring Boot with MySQL database integration. Implemented resource browsing by module, year, and semester, along with student features to manage their own uploads through update and delete functionalities.

Smart Campus Resource Management System – Resource & Category Management Area (Spring Boot, React.js, MySQL)

Worked as part of a team to develop a smart campus web application for managing university resources such as lecture halls, labs, and equipment. Designed and implemented the resource management module using Spring Boot with RESTful APIs to support creating, updating, viewing, and deleting resources. Developed the frontend using React.js to provide an easy to use interface for administrators. Implemented a multi image upload feature for resources and added filtering options based on type, capacity, and location. Applied role based access control to ensure only admins can manage resources.

Tech Pro – Online Tech Store Web Application (MERN Stack)

Developed a modern online tech shopping store enabling users to browse electronic products, manage carts, and complete purchases through a fully responsive and user-friendly UI. Built a secure and scalable backend using Node.js and Express.js, managed application data with MongoDB, and implemented the frontend using React.js with modern UI components. Integrated secure user authentication and authorization using JWT and role-based access control to ensure data integrity, system reliability, and user protection.

Online Shopping Store Web Application (PHP, HTML, CSS, JavaScript)

Developed a modern online shopping store that enables users to browse products, manage carts, and complete purchases through a responsive and user friendly interface. Built the backend using PHP to handle business logic and server side operations, managed application data with MySQL, and implemented the frontend using HTML, CSS, and JavaScript for an interactive user experience. Integrated secure user authentication, session management, and role-based access control to ensure data integrity, system reliability, and user protection.
